[What To Do After Having Sex](#)

GET SYMPTOMS LOOKED AT

Guys, if you experience:

- **Bleeding**
- **Discharge from the penis**
- **Pain during ejaculation**
- **Any rashes and sores around the genital area**

...get checked at your nearest sexual health clinic or see your GP as soon as possible.

Girls, if you experience:

- **Unexplained bleeding**
- **Pain when you pee**
- **Unusual discharge**
- **Itching**
- **Sores**

... get checked at your nearest sexual health clinic or see your GP as soon as possible.

TIMING DOESN'T MATTER

Regardless of what time of the month or position you had sex in, **there's always a risk of pregnancy with unprotected sex.**

The "withdrawal" method is also not a reliable form of contraception!

PICK UP FREE CONDOMS

Avoid carrying around an out-of-date condom by getting **free ones from a sexual health clinic or GP surgery.**

Remember, **one size won't fit all** – one that's too big or too small can slip off during sex.

EMERGENCY COIL

The IUD (intrauterine device, or coil) can be fitted up to **5 days after unprotected sex.**

This is the most effective form of emergency contraception, and also provides **ongoing contraception.**

EMERGENCY CONTRACEPTIVE PILL

Depending on the type, the morning after pill can be **effective for 3-5 days** after unprotected sex.

You wouldn't be alone in using it:

1 in 10 women aged 20-29 have taken it at least once.

HEP C & SYPHILIS

Hepatitis C and syphilis are on the rise among gay men.

Be proactive by practising safe sex and never sharing needles, and get screened if you're concerned.

SAME-SEX SEX

STIs can be spread by sharing toys and through oral sex.

Be safe next time by using **a dental dam or another form of latex barrier**, avoiding sharing toys and always washing them after use.

One Stonewall survey found that less than half of lesbian and bisexual women had ever had a sexual health test – **but 50% of those who had been screened had an STI.**
